My goal... landing a mechanical engineering position at a design firm.

Getting to know myself...
Through Wash. U., I discovered interests I didn’t know I had. I started out in engineering, but when I took an art elective class, I realized that I also had a creative side too.

Bringing my story to life...
Combining my engineering and design skills allows me to ensure ideas are both feasible and aesthetically pleasing. With the help of Martin, my Career Advisor, I developed a portfolio that would be well received by employers in the industry.

Up next...
Finding a mechanical engineering position at a design firm. In a few years, I would like to enroll in an industrial design graduate program.

FROM PASSION SPRINGS PURPOSE

"Don’t be afraid to branch out and send emails to companies that traditionally don’t post internships."

Chris’s Career Tip

22 Career Advisors, including two MDs, two JDs, two PhDs, and 14 master’s degrees
