My goal... applying my problem-solving skills to construction management.

Kristen Cardenas, who will graduate in May 2012 with a major in Civil Engineering, interned with Paric Corporation in St. Louis this summer.

Getting to know myself...
From mentoring programs to advisors, Wash. U. has given me the tools to succeed and discover new things on my own.

Bringing my story to life...
It’s difficult to experience the practical side of engineering in a classroom setting.

Through my internships with the Federal Highway Administration and Paric Corporation, I learned what is right for me: I enjoy being on-site everyday.

Up next...
Construction management! I love that there is always a new challenge that requires problem-solving skills.

FROM PASSION SPRINGS PURPOSE

“Make the most of your experience: you can learn something new from every situation.”
