My goal... combining my engineering background with my interest in athletics.

Zack Cole, who will graduate in May 2013 with a major in Mechanical Engineering and minor in Economics, interned with CORO Kansas City this summer.

Getting to know myself...
During freshman year, I didn’t know what my future career would entail. Taking a variety of classes, I began to realize there was a connection between economics and engineering, both of which interested me.

Bringing my story to life...
The CORO Fellow Program gives interns access to five sectors: business, government, nonprofit, labor and media.

After five weeks of classes, interns shadow individuals in the five sectors. I found I am most interested in project management and possibly public relations as well as marketing. It’s opened a lot of doors.

Up next...
Next year I will be looking for a more specific internship, such as engineering, a project management firm, or sports architecture.

FROM PASSION SPRENS PURPOSE
"Keep an open mind. Whether you have a positive or negative experience, you will always learn something."
Zack’s Career Tip

150+
Number of new employers recruiting on campus last year.

THIS WEEK’S OPPORTUNITIES
John Deere
American Enterprise Institute for Public Policy Research
Ascension Health
Anheuser-Busch/InBev
Fleishman-Hillard
